

Frontend Development – Student System Setup Guide

Purpose

This guide explains everything students need to install before starting frontend development classes.

1. Google Chrome (Required)

Chrome will be used as the main browser for testing websites and using Developer Tools.

- Best browser DevTools for frontend developers
- Used to open and test HTML, CSS, and JavaScript files

2. Visual Studio Code (VS Code) – Required

VS Code is the code editor where students will write HTML, CSS, and JavaScript.

- Free and beginner-friendly
- Industry-standard editor

3. VS Code Extensions (Install After VS Code)

- **Live Server:** Automatically reloads the browser when files change.
- **Prettier:** Formats code automatically.
- **HTML CSS Support:** Provides autocomplete for HTML and CSS.
- **Auto Rename Tag:** Automatically renames closing HTML tags.

4. Tools NOT Needed at the Start

- Git – Will be installed later in the course
- Node.js – Needed only when learning React

5. Basic File Knowledge

- Create folders and files correctly
- Always save HTML files with .html extension
- Refresh browser to see changes

Final Checklist

- Google Chrome installed
- Visual Studio Code installed
- VS Code extensions installed
